

CASE STUDY

WORKSHOP FLOOR

ANTI SLIP / FATIGUE FLOORING

PRODUCT NAME

Rubbertech Safeway

APPLICATION

Cold hard workshop floor causing fatigue to staff members when working a prolonged period of time at work station.

The introduction of Rubbertech Safeway provides a comfortable and safe working environment whilst also protecting workshop materials if they were to be dropped on the floor.

Made from the best quality SBR reclaimed rubber, 99% recycled and manufactured in Ruthin, North Wales.

The mats are 1m x 965mm x 30mm and although they are not made to measure, they can be easily cut down to size on site and easily installed using an inclusive pegging system. Spray adhesives can also be applied in order to securely affix application and the painting of chlorinated yellow paint H&S markings finishes the installation.
